

Step 1: The CellGuardians Dashboard screen will be blank at first because there are no allowed applications. Once the Guardian approves some apps, tap the Refresh Settings button to update the dashboard. The new allowed apps will be displayed.

Dashboard

Home

Step 2: Now that a user is linked to their Guardian, the Guardian's dashboard will be populated with that user. The Guardian can select the Installed Applications button to choose which apps will be allowed to the user while driving. Simply select the On/Off button to toggle.

Protected Mode: Now that everything is setup, CellGuardians will stay on the phone and activate Protected Mode when it senses the user is driving. This mode disables some buttons and will remain on while driving as to only allow the user access to the Guardian specified apps. To exit Protected Mode, select the Exit Protected Mode button at the bottom. This will pause Protected Mode for 15 minutes and notify the user's Guardian. Simply select any available apps to open them.
